

# 1 cBioPortal new study report

Report for study: ./acyc\_mda\_2015/raw\_data\_clinical.txt

## 1.1 Attribute matches

Below are the possible matches between attributes from existing data on the cBioPortal and the new study. The metric used to detect each match is denoted by the symbols following the attribute name of the match. Additionally, the number of studies in which the matching attribute occurs is given to indicate how popular the attribute is among existing studies. In the second table, predictions are given as to whether an attribute is a patient or sample attribute. The sample/patient prediction is based on what is most common for that particular attribute in the existing cBioPortal studies.

New study attribute	Possible matches
AGE	AGE^ (found in 123 other studies)
FISH	No matches found
FUSION_OTHER	No matches found
HISTOLOGY	HISTOLOGY^ (found in 11 other studies)
HISTOLOGY	KATABI_PATH* (found in 1 other studies)
HISTOLOGY	OFFICIAL_PATH* (found in 1 other studies)
MYB/MYBL1-FUSION	No matches found
MYB_MYBL1_FUSION_METHOD	No matches found
MYB_NFIB_REARRANGEMENT	MYB_NFIB_REARRANGEMENT^ (found in 1 other studies)
OTHER NFIB FUSION	No matches found
PNI	No matches found
SEX	SEX^* (found in 36 other studies)
SEX	GENDER* (found in 83 other studies)
SITE	No matches found
SIZE(CM)	No matches found

^ represents matches found based on the attribute names

\* represents matches found based on clustering of the attribute values

## 1.2 Matching attribute types

Matching Attribute	Patient or Sample prediction
AGE	Patient
HISTOLOGY	Patient
KATABI_PATH	Patient
OFFICIAL_PATH	Patient
MYB_NFIB_REARRANGEMENT	Patient
SEX	Patient
GENDER	Patient

### 1.3 Number of attribute distributions

Figure 1: Comparison between the number of attributes in the new study and the number of attributes in each existing study on cBioPortal. The dashed black line indicates the number of attributes in the new study, while the histogram shows the data for existing cBioPortal studies.

Figure 2: Comparison between the number of unique attributes in the new study and the number of unique attributes in each existing study on cBioPortal. The dashed black line indicates the number of unique attributes in the new study, while the histogram shows the data for existing cBioPortal studies.

Figure 3: Comparison between the number of common attributes in the new study and the number of common attributes in each existing study on cBioPortal. The dashed black line indicates the number of common attributes in the new study, while the histogram shows the data for existing cBioPortal studies.
